

There is a final project that is to be emailed to your instructor at the end of the course and after you have completed the Final Exam. This document describes Step 1 of the final project.

The base web site is to be built first. Use the modern method of building a PHP web site (separating files). The images and CSS file for the Walters Widget web site has been included in the resource folder of this section. Feel free to modify the CSS file as required. The application will have a navigation section for Home, Step 1, Step 2 and Step 3. There are three steps to complete the final project. Below you will find the requirements for Step 1 which is to be viewed when the user clicks on the Step 1 menu item.

Make sure you keep this web site handy for the rest of the course.

#### Final Project Step 1

Write a web application that will allow a user to enter an employee's first name and last name. The application will also allow the user to enter the number of hours an employee worked for a given week, along with the hourly wage the employee earns. The user will then click on a Calculate button to generate the gross pay for the employee.

The application will then subtract and display the amount of payroll tax the employee is to pay. The payroll tax is calculated based on 25% of the gross pay. Then the net pay is to be displays. All the calculations to generate the final pay is to be done on a separate PHP file with the name of payStep1.
